Dear Mr. O'Sullivan

Re: QuakeKoso Seismic Gas Shut-Off Valves

During my tenure as a Manager with the \$133 million dollar Seismic Mitigation Program of the Province of B.C., we were assisted by a number of vendors providing seismic mitigation related components.

These vendors due to their knowledge and experience were a great help in making the program the success it was.

The staffs at QuakeKoso were particularly helpful in guaranteeing a successful mitigation program. The installation of the QuakeKoso seismic gas shut-off valve at schools, hospitals, universities, colleges, government buildings and social housing complexes was carried out in a professional manner.

We were very satisfied with the entire process showed by QuakeKoso staff in the supply, installation, inspection and erection of protection cages around the valves.

We reviewed a number of related products when considering the QuakeKoso valve and chose this product because of its reliability, straight-forward design, limited maintenance and cost.

We would not hesitate to recommend this product to any potential customer.

Yours truly,
