To Whom It May Concern,

The North Shore Health Region (NSHR) had QuakeKoso Canada Inc., install two KOSO automatic gas shutoff valves for the Lions Gate acute care hospital.

We chose them because the valves were simple and reliable mechanical devices that need no source of power to operate them in an earthquake situation.

Also, our research shows that these valves are not prone to accidental gas shutoff when they have been properly installed and braced. These seismic valves augment the electrical sensor-operated gas safety system at the hospital, to provide a more reliable gas shutdown that isn't power dependant.

Based on experience at the NSHR, these KOSO valves provide effective seismic gas safety protection, either independently, or in conjunction with other gas-safety systems.

I have no hesitation in recommending both QuakeKoso Canada Inc., and the KOSO Automatic seismic gas shutoff valve.

Yours Truly,

Don Friesen, P. Eng.

Former Director, Plant Services,  
North Shore Health Region
